INNOVATION GROOVE ACADEMY

The confusion surrounding the selection of Grade 10 pathways is significant. Many students spend an entire year uncertain about which pathway to choose, often wondering whether they can still change their choice or whether it is already too late.

This is the reason why, at Innovation Groove Academy, we found it important to begin Engineering and medical sciences for career pathways exposure in Junior school Grade 7 to 9. We believe that the confusion should occur in Grade 7 and 8 when students are still exploring their interests and abilities, rather than in Grade 10, when critical decisions must already be made. Most of our students settle on their preferred pathways by Grade 8, making their Grade 10 transition more confident, informed and purposeful.

At Innovation Groove Academy, learners are exposed to disciplines such as Electrical Engineering, Automotive Engineering, Building and Construction, and Medical Sciences from Grade 7 to 9.

This early exposure stimulates their minds to explore diverse possibilities beyond what is immediately presented to them. It also enables learners to make informed and confident decisions regarding their Grade 10 pathways. By Grades 8 and 9, learners have developed a clearer understanding of the available pathways, making their transition to Grade 10 more confident, informed, purposeful, and aligned with their interests, abilities, and future career aspirations.

UNLOCKING POTENTIAL THROUGH COMPETENCY-BASED EDUCATION

The Ministry of Education, through Competency-Based Education (CBE), has intensified efforts to align the System of Education with labour-market demands. A process commonly referred to as the vocationalization of education.

This approach seeks to ensure that what learners acquire in school reflects the skills and competencies required by the labour market, thereby producing versatile graduates with multiple skills that enable them to adapt to technological advancement and diverse employment opportunities.
