INNOVATION GROOVE ACADEMY

At this stage, where the child has spoken his/her dream, every parent needs to be attentive and should take such statements seriously for they are early indicators of the child's vision and emerging purpose and the reason you are paying school fees.

Learners registration are ongoing every **Tuesday and Friday** at 9.00am.
Call Us on **0793-0230054**
or
0711-674765

The daily potential consistently drawn from the child and processed, develop a mental image of the child's destiny. By Grade 3 a child may begin to express career aspirations such as wanting to become a Doctor, an Engineer as a result of the image they can see within the mind. This is the abundant of the heart where the mouth speaks. God shows the crown (career) before we see the pain (process) so that we fight our way through to the crown (professional). The crown is more powerful than the sacrifice (process).

UNLOCKING POTENTIAL THROUGH COMPETENCY-BASED EDUCATION

When a child begins school at around the age of three, the teacher assists the child to stir-up potential through purposeful teaching and learning experiences. As the child pays attention, observes and participates actively in class, hidden potential is gradually drawn out from the child. From Playgroup through PP1, PP2 to Grade 6, each learning experience contributes to the discovery and development of the child's unique abilities.

The above picture demonstrates a storey building made of old cartons and glue. The learners have made aeroplane using old plastic bottles, cartons, glue and paint. These Grade 3 learners have understood the importance of conserving the environment through reducing, reusing and recycling materials disposed of within the environment.
